Course Structure

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Grading

Add WeChat edu_assist_pro

- Homework (45%): Roughly 10 of
- Take-home tests (40%):
 - Test 1 (10%)
 - Test 2 (10%)
 - Final (20%)
- Participation (15%): Gradescope check-ins, HW0, etc.

Homework Policies

- Weekly assignments due Thursday @ 11:59PM
- No late days, no extensions
- Lowest homework score will be dropped

Assignment Project Exam Help

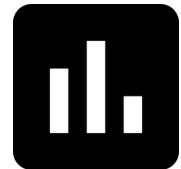

- Homework to be <https://eduassistpro.github.io/>
 - Entry code: 2RB
- You are encouraged to typeset [Add WeChat edu_assist_pro](#)ns in LaTeX (resources available on course webpage)
- HW0 out, due Th 1/28 (just some housekeeping)
- HW1 to be released on Th 1/28, due Th 2/4

Homework Policies: Collaboration

- You are encouraged to work with your classmates to discuss homework problems
- HOWEVER: **Assignment Project Exam Help**
 - You may collaborate with students
 - You must acknowledge and write "Collaborators: none" if you worked alone
 - You must write your solutions by
 - You **may not** share written solutions
 - You **may not** search for solutions using the web or other outside resources
 - You **may not** receive help from anyone outside the course (including students from previous years)

<https://eduassistpro.github.io/>

the s
Add WeChat edu_assist_pro

- Other resources available on course webpage

Gradescope Check-ins

- Your class participation score (15% of the course grade) will be determined by your answers to short reflection questions after each lecture

Assignment Project Exam Help

- Questions will be answered via polls and discussions

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

- You'll be graded 50% on participation and 50% on correctness

Piazza

- We will use Piazza for announcements and discussions
 - Ask questions here and help your classmates
 - Please use private messages / email sparingly

Assignment Project Exam Help

<https://eduassistpro.github.io/>

You can earn bonus points towards participation grade by participating thoughtfully on Piazza. Add WeChat [edu_assist_pro](#)

Expectations and Advice for in CS 33

Assignment Project Exam Help
<https://eduassistpro.github.io/>
Add WeChat edu_assist_pro

Our (the Course Staff's) Responsibilities

- Guide you through difficult parts of the material in lecture
- Encourage active participation in lectures / section
- Assign practice problems and homework that will give you a deep understanding of the material
Assignment Project Exam Help
<https://eduassistpro.github.io/>
- Give detailed (formative) feedback on assignments
Add WeChat edu_assist_pro
- Be available outside of class (Email, Piazza)
- Regularly solicit feedback to improve the course

Your Responsibilities

- Concepts in this course take some time to sink in. Keep at it, and be careful not to fall behind.
- Do the assigned reading on each topic **before** the corresponding lecture.
- Take advantage of <https://eduassistpro.github.io/>
- Participate actively in lectures and on Piazza.
- Allocate lots of time for the project, comparable to a project-based course, but spread more evenly.

Add WeChat edu_assist_pro

Prerequisites

This class is fast-paced and assumes experience with mathematical reasoning and algorithmic thinking

You must have passed CS 330 – Intro to Algorithms

This means you should be comfortable with:

- Set theory
 - Functions and
 - Graphs
 - Pigeonhole principle
 - Propositional logic
- Recursive notation
 - Algorithms (
 - Programming
 - NP-completeness

<https://eduassistpro.github.io/>

Add WeChat [edu_assist_pro](https://eduassistpro.github.io/)

Come talk to me if you have questions about your preparation for the course

Advice on Homework

- Start working on homework early! You can get started as soon as it's assigned.
- Spread your homework time over multiple days.
- You may work in groups (of up to 4 people), but think about each problem notes before your group meeting.
<https://eduassistpro.github.io/>
- To learn problem solving, you have to do it:
 - Try to think about how you would solve **any** presented problem before you read/hear the answer
 - Do exercises in the textbook in addition to assigned homework problems

Advice on Reading

- Not like reading a novel
- The goal is not to find out the answers, but to learn and understand the techniques
- Always try to predict what's coming next
- Always think about how to approach a problem before reading the solution
- This applies to things that are explicitly labeled as exercises or problems!

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Academic Integrity

Extremely important: Read and understand the Collaboration and Honesty policy before you sign it

Violations of the collaboration policy...will result in an automatic failing grade and will be reported to the Academic Conduct Committee (ACC). The ACC often suspends or expels students deemed guilty of plagiarism or other forms of cheating

Assignment Project Exam Help

<https://eduassistpro.github.io/>

If you find yourself in a desperate situation:

Add WeChat edu_assist_pro

- Hand in as much of the assignment as you're able to complete
- Remember the lowest HW grade is dropped
- Talk to us! We want to help

...cheating is seriously not worth it

Course Assignment Project Exam Help
<https://eduassistpro.github.io/>
Add WeChat edu_assist_pro

Objective

Build a *theory* out of the idea of *computation*

Assignment Project Exam Help

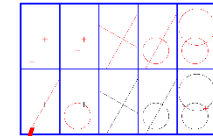

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

What is “computation”

- Examples:

- Paper + pencil arithmetic
- Abacus
- Mechanical calculator
- Ruler and compass
- Java/C programs

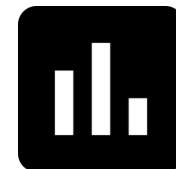

Assignment Project Exam Help
ns

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

- **For us:** Computation is the processing of information by the unlimited application of a finite set of operations or rules

Other examples of computation?

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

What do we want in a “theory”?

- General ideas that apply to many different systems
- Expressed simply, abstractly, and precisely
- **Generality** **Assignment Project Exam Help**
 - Independence from the future as well as the present <https://eduassistpro.github.io/>
 - Abstraction: Suppresses inessential details
Add WeChat edu_assist_pro
- **Precision:** Can prove formal mathematical theorems
 - Positive results (what *can* be computed): correctness of algorithms and system designs
 - Negative results (what *cannot* be computed): proof that there is no algorithm to solve some problem in some setting (with certain cost)

Parts of a Theory of Computation

- Models for **machines** (computational devices)
- Models for the **problems** machines can be used to solve
- **Theorems** about what kinds of machines can solve what kinds of problems, and at what cost

Assignment Project Exam Help

<https://eduassistpro.github.io/>

This course: Sequential, single-processor computing

Add WeChat edu_assist_pro

Not covered:

- Parallel machines
- Real-time systems
- Distributed systems
- Mobile computing
- Quantum computation
- Embedded systems

What is a (Computational) Problem?

A single question with infinitely many instances

Examples:

Parity: Given a string consisting of a 's and b 's, does it contain an even number of a 's?

Primality: Given n (represented in binary), is n prime?

Halting Problem: Given a C program P and input x , does P ever get stuck in an infinite loop?

For us: Focus on *decision* problems (yes/no answers) on *discrete* inputs

What is a (Computational) Problem?

For us: A problem will be the task of recognizing whether a *string* is in a *language*

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

What is a (Computational) Problem?

For us: A problem will be the task of recognizing whether a *string* is in a *language*

- **Alphabet:** A finite set Σ
Ex. $\Sigma = \{a, b\}$
<https://eduassistpro.github.io/>
- **String:** A finite concatenation of symbols
Ex. $bqr, ababb$
 ε denotes empty string, length 0
 Σ^* = set of all strings using symbols from Σ
- **Language:** A set L of strings

Examples of Languages

Parity: Given a string consisting of a 's and b 's, does it contain an even number of a 's?

$\Sigma =$ $L =$

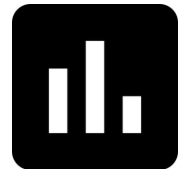

Assignment Project Exam Help

Primality: Given a resented in
binary), is <https://eduassistpro.github.io/>

$\Sigma =$ $L =$ **Add WeChat edu_assist_pro**

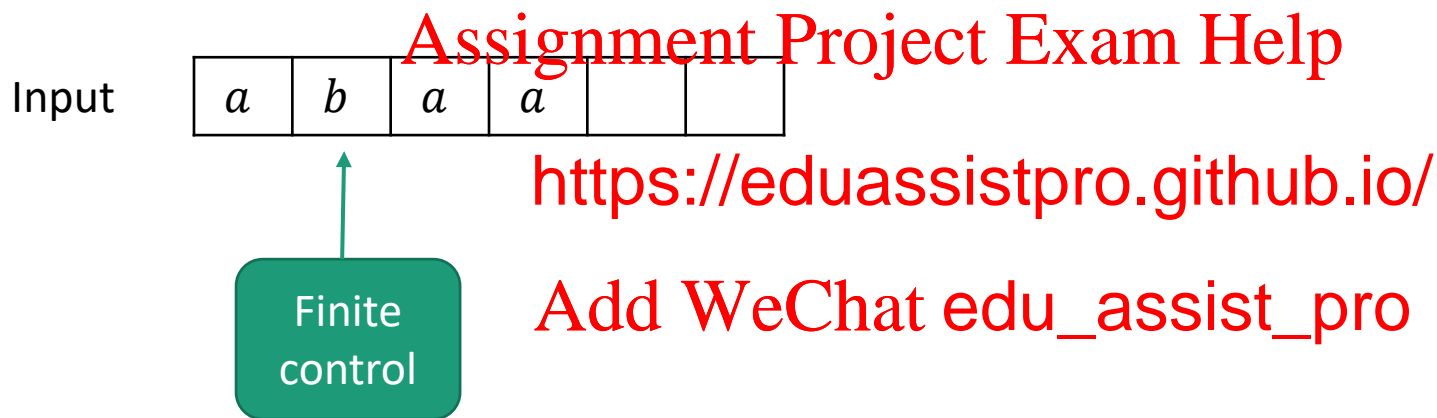

Halting Problem: Given a C program, can it ever get stuck in an infinite loop?

$\Sigma =$ $L =$

Machine Models

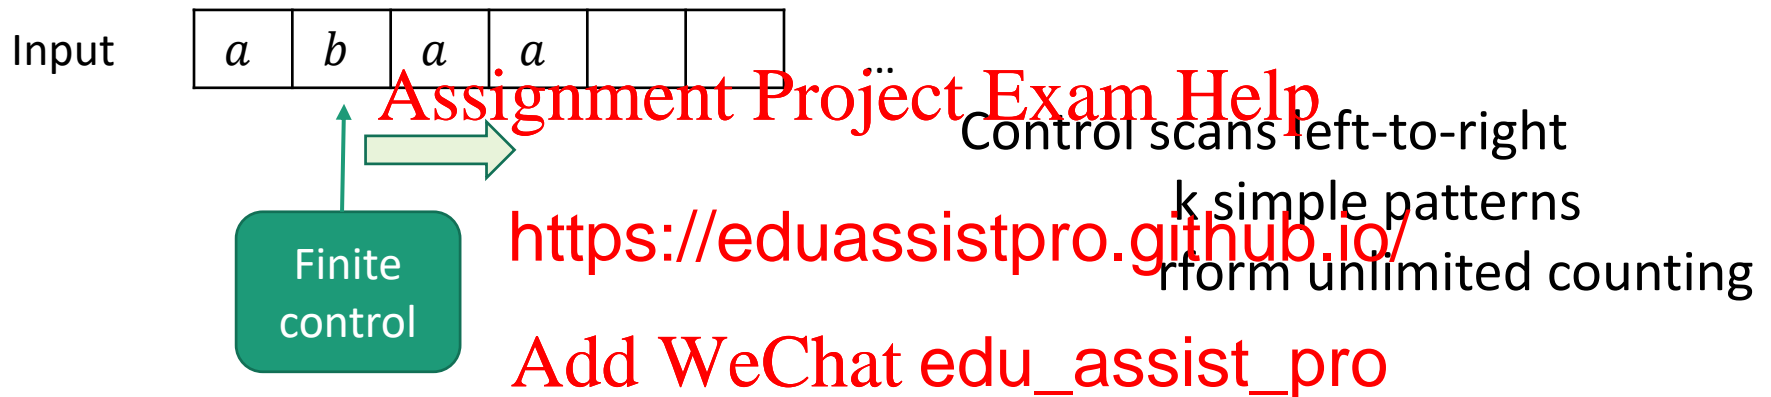

Computation is the processing of information by the **unlimited application** of a **finite set** of operations or rules

Abstraction: We don't care how the control is implemented. We just require it to have a finite number of states, and to transition between states using fixed rules.

Machine Models

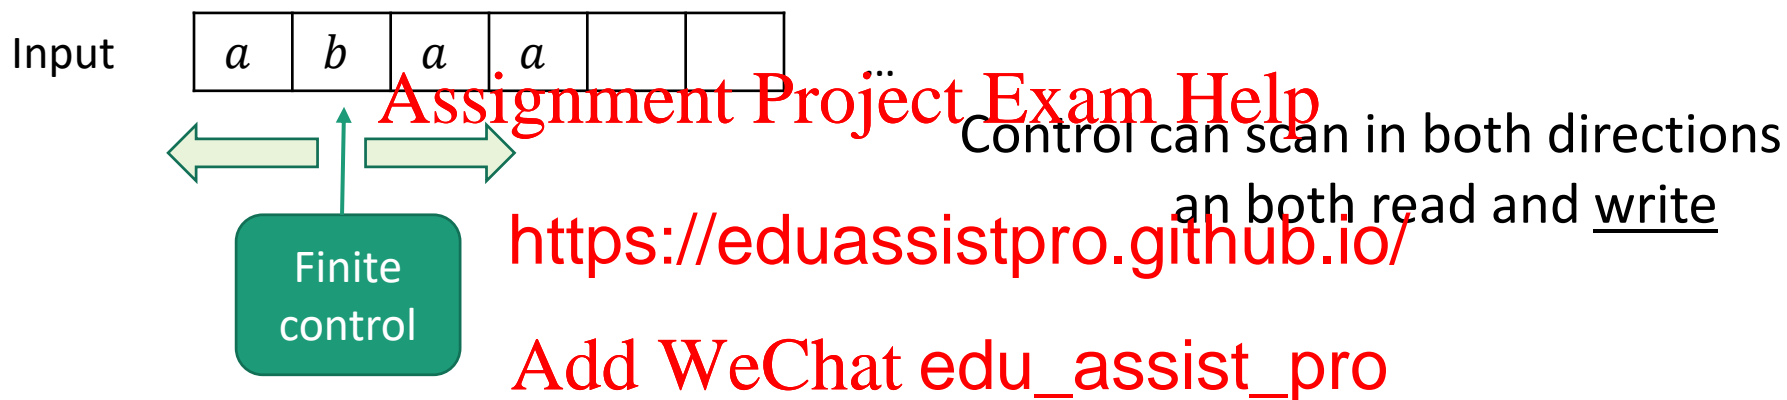

- Finite Automata (FAs): Machine with a finite amount of unstructured memory

Useful for modeling chips, simple control systems, choose-your-own adventure games...

Machine Models

- Turing Machines (TMs): Machine with unbounded, unstructured memory

Model for general sequential computation

Church-Turing Thesis: Everything we intuitively think of as “computable” is computable by a Turing Machine

What theorems would we like to prove?

We will define classes of languages based on which machines can recognize them

Inclusion: Every language recognizable by a FA is also recognizable by a

<https://eduassistpro.github.io/>

Non-inclusion: There exist languages recognizable by TMs which are not recognizable by

Add WeChat edu_assist_pro

Completeness: Identify a “hardest” language in a class

Robustness: Alternative definitions of the same class

Ex. Languages recognizable by FAs = regular expressions

Why study theory of computation?

- You'll learn how to formally reason about computation
- You'll learn the technology-independent foundations of CS

Assignment Project Exam Help

Philosophically in <https://eduassistpro.github.io/>

- Are there well-defined problems that cannot be solved by computers?
- Can we always find the solution to a puzzle faster than trying all possibilities?
- Can we say what it means for one problem to be “harder” than another?

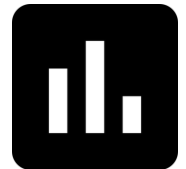

Why study theory of computation?

- You'll learn how to formally reason about computation
- You'll learn the technology-independent foundations of CS

Assignment Project Exam Help

Connections to other fields: <https://eduassistpro.github.io/>

- Finite automata arise in computing, chemistry
<https://cstheory.stackexchange.com/questions/8>
- Hard problems are essential to cryptography
- Computation occurs in cells/DNA, the brain, economic systems, physical systems, social networks, etc.

Why study theory of computation?

Practical knowledge for developers

“Boss, I can’t find an efficient algorithm.
I guess I’m just too dumb.”

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

“Boss, I can’t find an efficient algorithm
because no such algorithm exists.”

Will you be asked about this material on job interviews?

No promises, but a true story...
